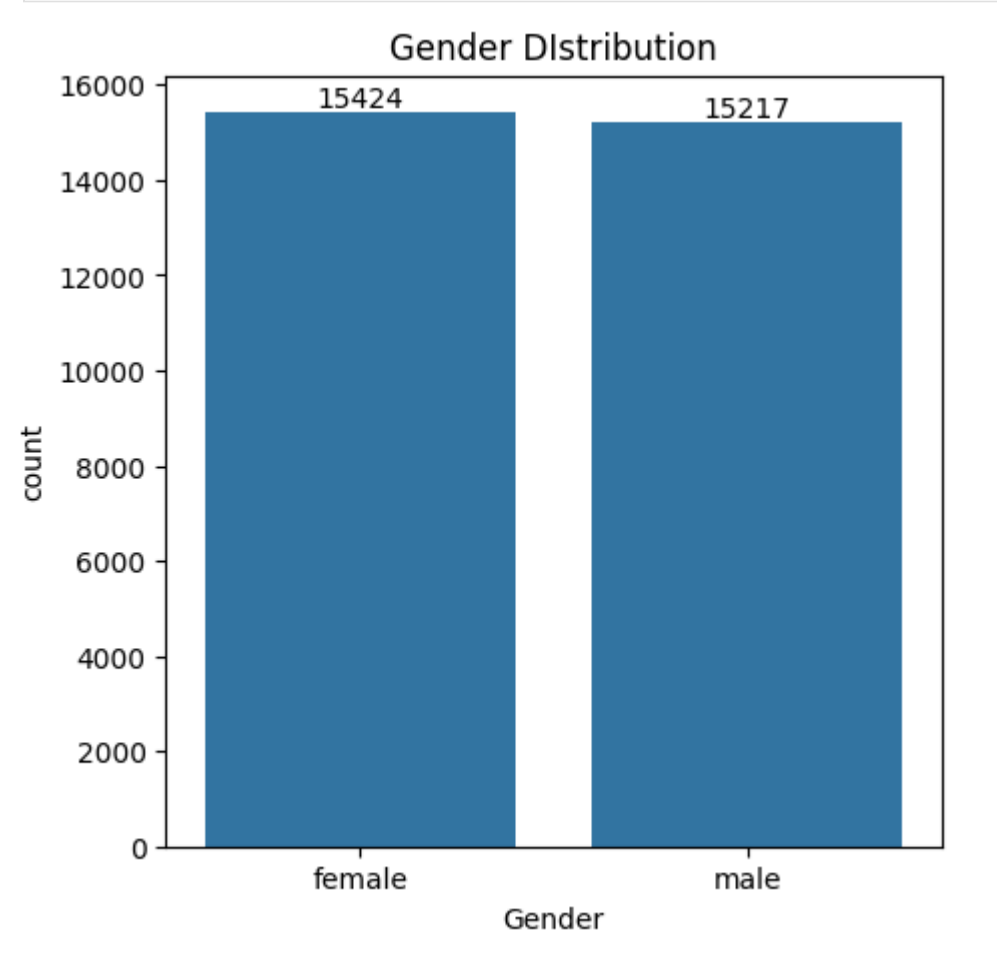
gender distribution#

In [16]:
```python
plt.figure(figsize= (5,5))
ax = sns.countplot(data = df, x = "Gender")
ax.bar_label(ax.containers[0])
plt.title("Gender DIstribution")
plt.show()
```



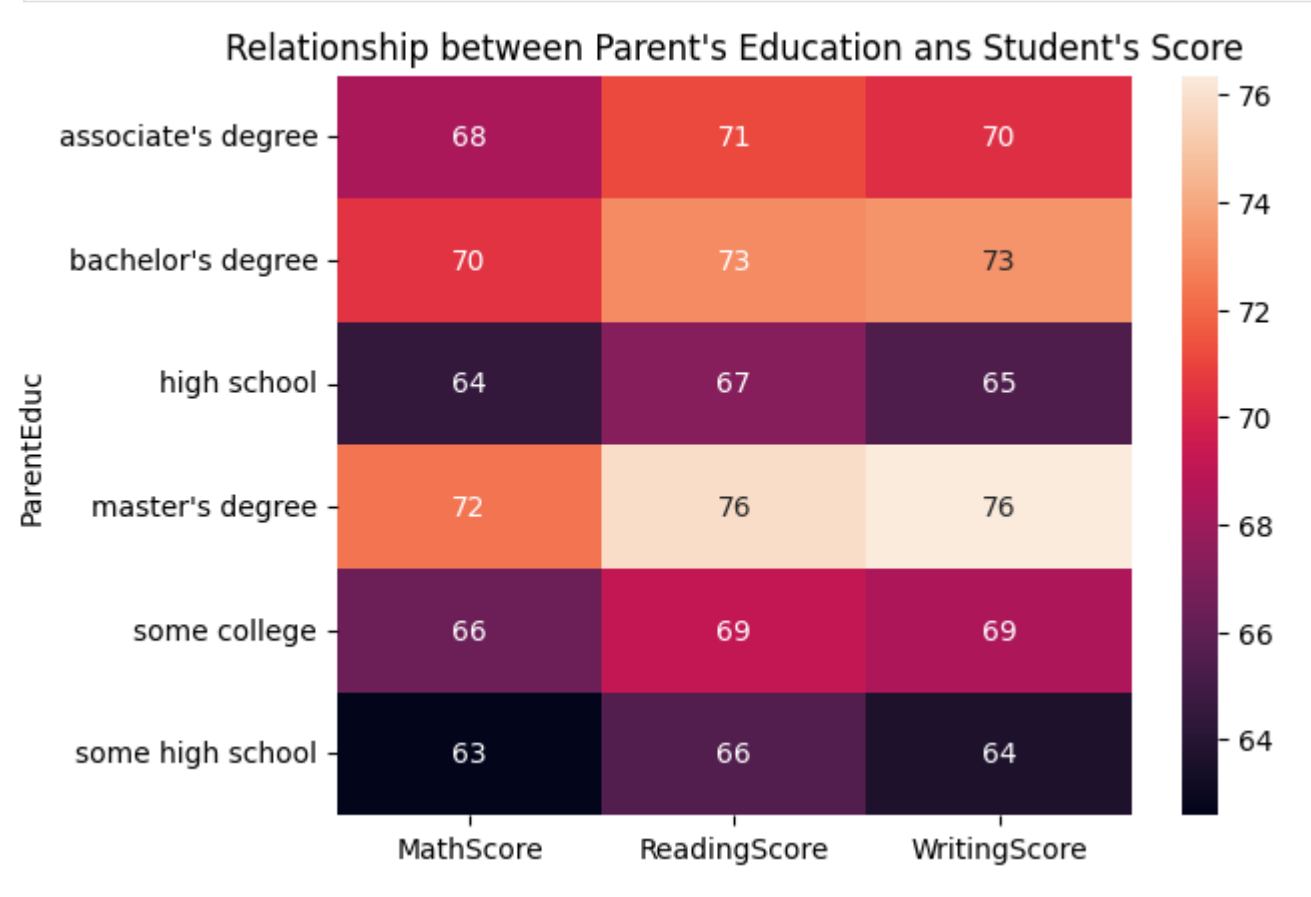
from the above chart we have analysed that:

the number of females in the data is more than the number of males

In [9]:
```python
gp = df.groupby("ParentEduc").agg({"MathScore":"mean","ReadingScore":"mean","WritingScore":"mean"})
print(gp)
```

```
                    MathScore  ReadingScore  WritingScore
ParentEduc
associate's degree  68.365586     71.124324     70.299099
bachelor's degree   70.466627     73.062020     73.331069
high school         64.435731     67.213997     65.421136
master's degree     72.336134     75.832921     76.356896
some college        66.390472     69.179708     68.501432
some high school    62.584013     65.510785     63.632409
```

In [17]:
```python
sns.heatmap(gp,annot=True )
plt.title("Relationship between Parent's Education ans Student's Score")
plt.show()
```

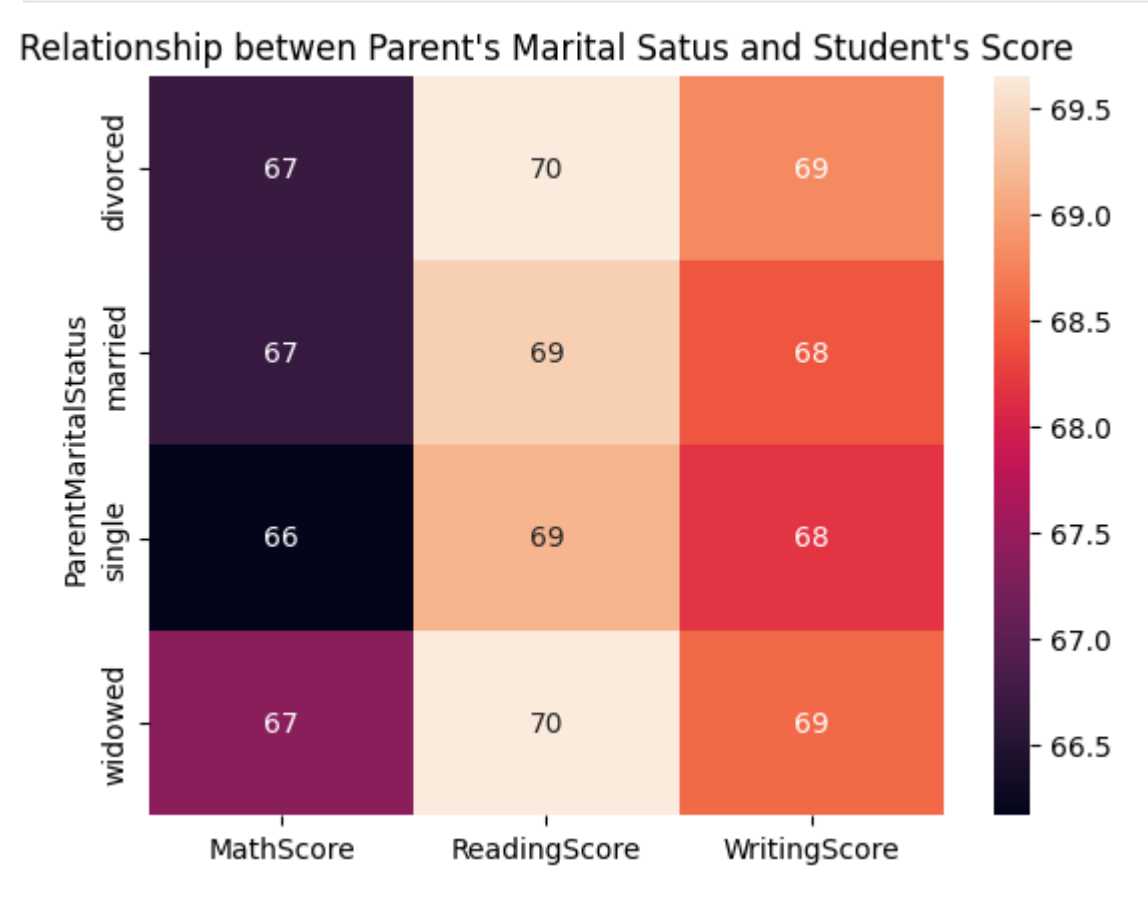


from the above chart we have concluded that the education of the parents have a good inpact on the course

In [12]:
```python
gp1 = df.groupby("ParentMaritalStatus").agg({"MathScore":"mean","ReadingScore":"mean","WritingScore":"mean"})
print(gp1)
```

```
                     MathScore  ReadingScore  WritingScore
ParentMaritalStatus
divorced             66.691197     69.655011     68.799146
married              66.657326     69.389575     68.420981
single               66.165704     69.157250     68.174440
widowed              67.368866     69.651438     68.563452
```

In [21]:
```python
sns.heatmap(gp1,annot=True )
plt.title("Relationship betwen Parent's Marital Satus and Student's Score")
plt.show()
```



from the above chart we have concluded that there is no/negligible impact on the

student's score to their parent's marital status

In [22]:
```python
